

How to Use the GPS

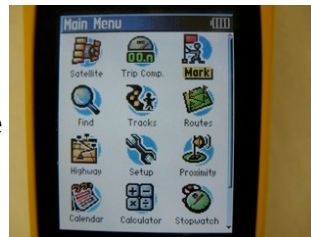

1. The **Power** button is the bottom right button. Press and hold to turn the gps on and off. Slightly pressing on the power button also adjusts brightness.
2. The **Pages** button is the top right button. You can push on this button to rotate through various gps functions. Think of it as your “911” button when you don’t know where to find something on the gps.
3. The **Main Menu** button is the bottom left button. This lets you see all of the items on the main menu.
4. The **Zoom in** and **Zoom out** buttons are the top and middle buttons on the left side.
5. The **Toggle** button is on the front of the gps unit. It works like a joystick- move it to the left, right, top, or bottom. You push the toggle straight **IN** (push down on it) to select what you have chosen.

Acquiring Satellites works best when you step away from the building and hold the gps flat in your hand. Once your gps has found enough satellites, it will display a map or partial map.

Marking a Waypoint

1. Go to the spot you want to mark. (If you are leaving an item there for someone to find, put the item down and if needed, put a small rock on top so it doesn’t blow away.)
2. Push the Pages button until you see the main menu
3. Use the Toggle to highlight and select Mark
4. Push straight down on the Toggle
5. OK will be highlighted
6. Push straight down on the Toggle a second time
7. You will now be back on the main menu

If you are marking multiple waypoints, repeat.

If many people are marking waypoints, be sure to stay at least 20-30 feet apart.

Finding a Waypoint

1. If you are not on the Main Menu, push the Pages button until you are
2. Use the Toggle to highlight the word Find
3. Push the Toggle straight down to select Find

4. Waypoints should be highlighted
5. Push the Toggle straight down to select Waypoints

6. Use the Toggle to select the desired waypoint
7. Push the Toggle straight down

8. Go To will be highlighted
9. Push the Toggle straight down

10. Usually a map is displayed
11. Push the bottom zoom button about 6x to "draw" a purple path

OR

Push the Pages button to see a compass which also displays the distance

Tips-

It doesn't work to stand or walk in circles; you need to start walking THEN follow the tip of the black arrow to your destination.

As you get close, you will hear a beep and see the "Arriving at destination" message.

The gps will get you to within about 6-9feet of the exact mark. Look around once you get within that distance
